

Bolthouse Farms' expands OAC to Manufacturing & Warehouse Operations Webinar May 4th - Registration Link Below

FOR ORACLE INTERNAL USE ONLY

Oracle Analytics Cloud Go-Live

Bolthouse Farms | Bakersfield, CA | www.bolthouse.com
Industry: Manufacturing

Oracle Products & Services Live: Oracle Analytics Cloud (OAC) Manufacturing
Systems Replaced: Microsoft Excel and Business Objects
Integrations: EPM Cloud, JD Edwards, KRONOS, Red Prairie, POS Data (SPINS)

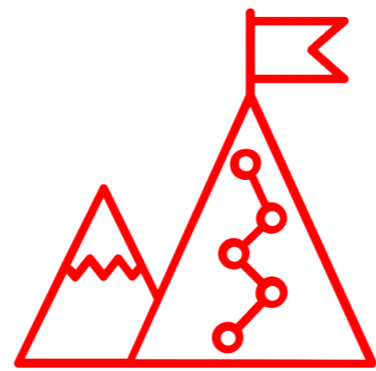

Bolthouse Farms produces refrigerated beverages, such as carrot juice and other fruit and vegetable juices, bottled coffee drinks, and vegetable protein based milks, as well as salad dressings and bagged produce. Their products are available at a variety of grocery and retail stores.

Project Overview

Bolthouse Farms has completed the first two phases of their Finance Transformation to the Cloud, establishing an advanced analytic, planning and reporting platform, utilizing Oracle Analytics, ADW and EPM Cloud. Their Line of Business (LOB) focused Analytics continues to expand, and is now focused on Manufacturing.

Additionally, in support of their long-term Supply Chain objectives, Bolthouse Farms has decided to integrate end-to-end planning and improve operations with Warehouse & Logistics (W&L) Analytics and EPM Cloud - Demand Planning.

Business Challenges

Bolthouse Farms has experienced healthy growth which accelerated their need to establish an advanced analytic and reporting platform. Burdened by highly manual reporting efforts, Bolthouse was looking to bring significant value by better enabling the organization to make informed business decisions. The first priorities were to:

- Enhance and expand the availability of daily production KPIs
- Build out warehouse labor standards and efficiency metrics
- Develop detailed mix and manufacturing variance reporting
- Enhance ad-hoc reporting and analytic capabilities
- Automate the reporting process
- Adapt operational dashboards

Key Accomplishments

Peloton Consulting Group successfully expanded the Oracle Analytics Cloud solution by incorporating Manufacturing, Warehouse and Transportation data into their Analytics roll-out. The solution has provided the following benefits to Bolthouse Farms' operations:

- Ad-Hoc reporting and analysis capabilities
- Automated daily, weekly and month-end manufacturing & warehouse operations reporting
- Streamlined data collection
- POS data integration to develop product acquisition strategies

Why Peloton Consulting Group

ORACLE | Sell Partner
Expertise in
Oracle ERP, EPM, HCM, SCM,
and Analytics Cloud
in North America

Peloton Consulting Group previously worked with Bolthouse Farms on multiple Cloud implementation projects. Through previous projects, solution workshops, and our analytics expertise, Peloton built trust throughout the Finance and IT organization providing the confidence to expand their Oracle Cloud platform to include Warehouse & Logistics (W&L) and EPM Cloud - Demand Planning.
